WORK EXPERIENCE

Contoso Payments

New York, NY

Senior Software Engineer: TypeScript, React, Node.js, PostgreSQL, AWS

March 2022 – Present

- Lead a 6-engineer squad that owns the Merchant Dashboard (React, TypeScript, Node.js), used by 40,000+ small-business merchants; run sprint planning, code review, and weekly releases.
- Built and own an LLM-assisted support triage service (Node.js, Claude API with tool calling) that classifies merchant tickets, pulls account context, and drafts replies for agent review; 60 support agents use it daily and median first-response time fell 31%.
- Designed an event-driven payout notification pipeline (AWS SQS, Lambda, PostgreSQL) that replaced a nightly batch job, so merchants see payout status within a minute instead of the next day.
- Led the redesign of the dispute (chargeback) response flow, cutting average merchant response time from 6 days to 2 and raising the dispute win rate by 12 percentage points.
 - Shipped a guided evidence checklist that assembles the card network's required documents automatically
 - Ran 3 rounds of merchant interviews with Risk and Design to define the flow before writing code
- Cut dashboard p75 load time from 3.8s to 1.6s with route-level code splitting and query caching, and raised the Lighthouse accessibility score from 71 to 98.
- Set the frontend testing standard (Jest, Playwright, visual regression) now used by 4 teams; production UI incidents fell by half over two quarters.
- Mentor two mid-level engineers through design reviews and pairing; both now lead features end to end.

Contoso Payments

New York, NY

Software Engineer: React, Node.js, PostgreSQL, AWS

June 2020 – February 2022

- Built the self-serve merchant onboarding flow, cutting signup to first payment from 5 days to 1 for most merchants.
 - Replaced an email-and-PDF identity check with in-app verification and bank linking
 - Onboarding completion rose from 58% to 81%
- Led the dashboard's migration from JavaScript to TypeScript (about 180,000 lines) in incremental releases with no customer-facing incidents.

Fabrikam Health

New York, NY

Software Engineer: React, Python (Django), PostgreSQL

July 2017 – May 2020

- Built appointment scheduling and reminder features for a patient portal used by 300+ clinics.
- Automated insurance eligibility checks with a Python service, cutting front-desk verification calls by 40%.
- Added audit logging for patient-record access (Python, PostgreSQL) that closed the portal's findings from the company's first HIPAA security review.

TECHNICAL SKILLS

• TypeScript, JavaScript, React, Next.js, Node.js, PostgreSQL, AWS (Lambda, SQS, ECS, S3), Python, React Native, GraphQL, Claude API, Jest, Playwright, Docker, Terraform

TECHNICAL PROJECTS (SOLE CREATOR & DEVELOPER)

[Pantry Planner](#)

January 2024 – Present

Next.js, TypeScript, Node.js, PostgreSQL, Claude API

- Built a meal-planning web app (Next.js, PostgreSQL) that turns what's in your pantry into a week of recipes and one grocery list; about 1,200 monthly active users.
- Designed the recipe matching engine (PostgreSQL full-text search plus ingredient substitution rules) that ranks recipes by what you already have; plans load in under 2 seconds.

[TrailLog](#)

May 2023 – Present

React Native, Expo, TypeScript, SQLite, AWS

- Built a hiking log mobile app (React Native, Expo) with offline GPS track recording and trail notes; live on iOS and Android, about 3,000 downloads.
- Designed offline-first sync (SQLite on device, merge on a Node.js API on AWS) so hikes recorded without signal upload cleanly later.

EDUCATION & INTERESTS

Northwind State University

Albany, NY

B.S. Computer Science

September 2013 – May 2017

Interests: Trail running, sourdough baking, board games, volunteer coding mentor at a Brooklyn library program
